

Novelties

TECNA is the market leader in the production and sale of balancers.

From packaging to ergonomics, 2022 has kicked off the introduction of four main innovations related to the models from 9310 to 9313.

Packaging

The packaging has been made stronger and the inner structure improved to ensure more effective product housing, to avoid damage even following knocks or harsh transport handling.

BALANCERS

2022 balancers innovations

DCB0100002_Rev.00_04/2022 - Castel San Pietro Terme - Tipografia F.lli CAVA srl

EN

New cable bushing

Made with a new V shape, this bushing makes the cable smoother and increases the maximum angle of inclination.

Reduces abrasion of the rope in the case of accidental contact.

New housing

The rear part of the cover has been made flat to make it easier to fit the balancer to a frame.

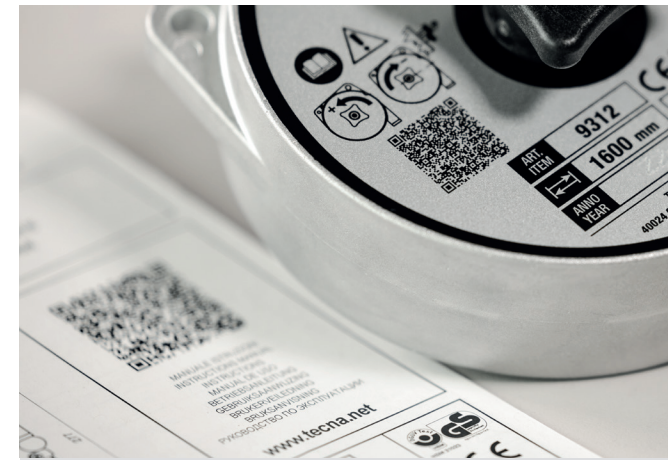

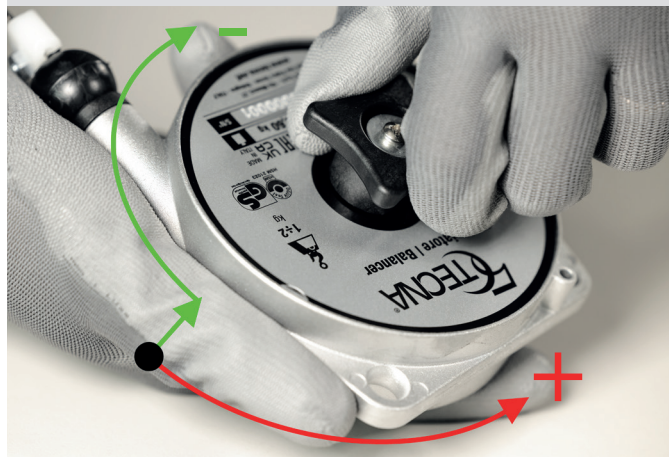

Useful when the balancer is installed on cartesian arms or reaction arms.

New adjustment knob

To adjust the capacity in an even easier and more comfortable way, the knob has been completely redesigned with a more ergonomic four-lobe shape.

The new design improves the operator's grip and increases the adjustment accuracy of the load by 30%.

QR insight

The QR Code on the plate provides quick access to the instruction manual and to the installation support video.

All within reach of your smartphone.
