

Novelties

TECNA is the market leader in the production and sale of balancers. From packaging to ergonomics, 2023 has kicked off the introduction of four main innovations related to the models from 9320 to 9323.

Packaging

The packaging is now stronger than ever. Its inner structure is designed to ensure the perfect product housing and to avoid damage during harsh transportation.

QR insight

The QR Code on the plate provides quick access to the instruction manual and to the installation support video. All within reach of your smartphone.

New fitting

For an even smoother installation, the upper profile of the housing has been redesigned by adding a hole aimed at mounting the safety rope.

New housing

The top and rear of the housing have been made flat to make it easier to fit the balancer to a frame. Useful when the balancer is installed on Cartesian arms or reaction arms.
